

BUILDING ON A STRONG BASE

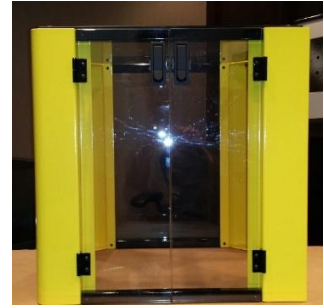

Take a second and just imagine building your dream home, but forgetting to put in a solid foundation. It might look nice at first, but soon enough, the problems would begin. The same can be said for the machinery in your facility right now. Without a solid base, a perfect drill, marker, or conveyor can become an expensive paperweight. Because we only sell our customers the best, we feature the custom machine bases from the experts at **Inter-Lakes Bases**. Why Inter-Lakes Bases? Well, here are a few compelling reasons.

<p>Inter-Lakes fabricates, grinds, machines, paints, and QC's the absolute best machine bases and related components in the industry.</p>		
<p>Standard bases are available, but a very large portion of their work is custom, ensuring a perfect fit with your machine.</p>		
<p>They can plasma cut your steel into any shape and they have 20 ton overhead cranes and a 10,000 pound fork lift, so no job is too big.</p>		
<p>Inter-Lakes' numerous grinders allow them to grind material up to 153" corner to corner to a flatness of better than .001" per foot.</p>		

If they go over their grinding capacity, they also have boring mills that allow them to keep the same flatness specs.

Combine all of this with CNC machining, a total of 40,000 square feet of manufacturing area, and amazing customer service and you start to see why Dixon Engineering trusts and relies on the experts at Inter-Lakes Bases.

If you want more information on Inter-Lakes Bases, visit their website (<http://www.interlakesbases.com/>) or contact us today. We look forward to working with you on your next machine base or weldment project.
