Learn More About **A-Line Corp.'s** Extensive Experience in Solutions for Industry:

For more than 15+ years, **A-Line Automation Corp.**, headquartered right here in the Carolinas, has been providing solutions for a variety of industries using their t-slot aluminum framing solutions and assembly automation components. With versatility, precision and durability of their products, the possibilities are endless. Take a look at what A-Line can do for you:

FABRICATION WITH ALUMINUM EXTRUSIONS

A-Line fabricates elegant solutions with aluminum extrusions, more commonly known as t-slots. This strong and lightweight product is configured into versatile structural frames, machine stands, mounting systems, workstations, test tables and control cabinets.

BOSCH COMPATIBLE ALUMINUM PROFILES

A-Line's Bosch compatible aluminum profiles can be used for many applications -from dividing walls and shielding applications to office setups and productions systems. They have many different profiles available and carry many specialty profiles as well.

PROTECTIVE BARRIERS

Are you looking to protect your employees from exposure to various infections? Need cost-effective protective barriers, safety shields and partitions? A-Line Automation can help protect you, your customers and your employees with customized, easy to assemble, cost-effective protective barriers, sneeze guards and partitions.

AUTOMATION FRAMING

T-Slot Aluminum Framing can be used to build conveyors and stands for your automated process or distribution and packaging facility. Their aluminum profiles are also a strong enough system that they can easily hold up to the task of pallet conveyance.

WHAT DO YOU WANT TO BUILD TODAY?

A-Line Automation has been designing and building custom-fabricated solutions for more than 15 years. Whether you have a 3D CAD drawing or just something on the "back of a napkin", they can turn your ideas into reality. They use a proven system of t-slot aluminum framing designed to be interchangeable with Bosch and Item. A-Line has everything you need to move your idea from concept to the production floor.
